Senior software engineer building Python applications, developer tools and AI agents.

## EXPERIENCE

### Senior Consultant

Apr. 2026 - Present

*Deloitte*

*Luxembourg*

- Automate regulatory reporting for major clients, reducing report preparation from several hours to minutes.
- Lead three developers: set technical direction, assign work and coordinate delivery while contributing code.
- Lead code reviews, mentor developers and improve team development workflows.

### Senior Software Engineer

Mar. 2023 - Mar. 2026

*TMC*

*Luxembourg*

*Deloitte (second mission)*

- Developed Sirius, a Python framework for institutional data transformation with automated documentation.
- Built a decision-tree DSL so non-engineers could update client logic, plus a VS Code extension with live diagrams, code actions and CLI tools.
- Established unit and snapshot testing to prevent regressions across framework updates.

*Bank of Luxembourg Investments (BLI)*

- Saved 100+ hours per quarter through automation; built internal tools with Django, HTMX and REST APIs.
- Replaced slow file scans with an indexed, cached query service for client inquiries, with monitoring, alerting and operational runbooks.

*Deloitte (first mission)*

- Built Stelar, a Python library for portfolio risk calculations, and a configuration-driven ETL toolkit using YAML and Excel specifications.
- Contributed reusable tools, CI/CD and test suites to a shared repository used across Deloitte engineering teams.

### Business Intelligence & Software Engineer

Feb. 2022 - Feb. 2023

*Amazon · Internship Feb.-Jul. 2022; full-time from Aug. 2022*

*Luxembourg*

- Launched the team's first ML forecasting solution for a \$60M+ operational plan.
- Built KPI and warehousing tools; operated analytics services with AWS CloudWatch logging, metrics and alerts.

### Junior Full-Stack Software Engineer

Jun. - Jul. 2019

*Vector ITC Group / Santander Bank*

*Spain*

- Delivered mobile app modules and secure backend systems for Santander Bank within an Agile team.

## SELECTED PROJECTS

**yoke** | *Python, FastAPI, MCP, WebSockets*

- Built a coding-agent platform as sole developer: CLI, web UI, HTTP API, MCP server and Python SDK on a shared runtime and tool layer.
- Implemented context compaction, resumable session branching and multi-agent orchestration; backed by 1,400+ tests, static type checks and Linux/Windows CI.

**Ionisium** | *Django, PostgreSQL, HTMX, Celery, AWS, Pulumi*

- Built a document distribution SaaS used by Spanish film companies including CaballoFilms, handling 250,000+ document deliveries across six client projects.

**TypedJinja** | *Python, TypeScript, LSP*

- Built Jinja2 template tooling with Python stub generation, completion, hover and go-to-definition; published on PyPI and the VS Code Marketplace.

**Development infrastructure** | *Python, Linux, Docker, Tailscale*

- Built Python tools to sync agent skills and SSH config; self-host apps with Docker, Tailscale and Coolify.

## TECHNICAL SKILLS

**Languages & web:** Python, SQL, JavaScript, Bash, Django, HTMX, REST APIs

**Data & infrastructure:** PostgreSQL, Pandas, Polars, AWS, Docker, Pulumi, Git, CI/CD

**Agent engineering:** Agent harnesses, context management, multi-agent orchestration, MCP

**Spoken languages:** English (fluent), Spanish (native)

## EDUCATION

**Universidad Politécnica de Madrid**

Sep. 2017 - Jul. 2022

Computer Engineering; Erasmus+ exchange at Aalto University, Finland.

Business Administration and Management; completed the full program in four years.
